

Mpox for MSM and LGBTQIA+

Mpox is a viral disease that can be spread from person to person through:

- physical contact
- touching objects
- respiratory secretions (eg. coughing, sneezing, talking)

Anyone can become infected with mpox, but most cases to date have been seen in:

- gay and bisexual men
- men who have sex with other men
- the LGBTQIA + community

"Stigmatizing people because of a disease is never ok. Anyone can get or pass on mpox, regardless of their sexuality." -
WHO.int

Protect Yourself

- Get vaccinated
- Avoid skin-to-skin or face-to-face contact, including sexual contact with anyone who has symptoms
- Wear a condom with any form of sexual activity
- Wear a mask if you are in close contact with someone with symptoms
